To the Editor of Review of Scientific Instruments

Subject: Submission of manuscript "A Demonstration of Affordable Surface Scanning Technology"

Dear Editor,

I am writing to submit our manuscript entitled "**A Demonstration of Affordable Surface Scanning Technology**" by L. C. Smith for consideration for publication as a regular Article in *Review of Scientific Instruments*.

In this manuscript, we take advantage of the vast array of python libraries such as Open3D and OpenCV along with affordable laser and imaging technology to create an affordable cost-effective surface scanning solution capable of sub-millimeter resolution.

While there are other surface scanning solutions that can achieve higher accuracy and precision in their results, this comes at a monetary cost that is simply not affordable by many researchers and technicians who may not need the accuracy and precision boasted by these instruments. We believe that this research will not just be of benefit to researchers, but to the broader scope of humanity through the underprivileged markets as well.

We believe this manuscript is a strong fit for *Review of Scientific Instruments* because it introduces a low cost yet sufficiently accurate scanning solution in contrast to the highly capable but costly devices whose abilities are beyond those required for a large portion of researchers and technicians.

I confirm on behalf of all authors that this work is original and has neither been previously published nor is it under review or consideration for publication elsewhere.

Thank you very much for your time and effort in considering our work. Please address all correspondence concerning this manuscript to me at levismit@pdx.edu.

Sincerely,

Levi Smith
